

## Delphi Developer Days 2017 Special Edition Database Workshop with Bob Swart and Cary Jensen: Press Release

June 8, 2017: For immediate release

*Summary: Bob Swart and Cary Jensen announce a special edition of Delphi Developer Days (<http://www.DelphiDeveloperDays.com>), a workshop focused on database development. The Delphi Developer Days 2017 tour visits three cities in the US and Europe from September to November 2017.*

Cities and dates for the 2017 Delphi Developer Days workshops are:

- Chicago, USA: 25-26 September 2017 [Register](#)
- Antwerp, Belgium: 9-10 October 2017 [Register](#)
- Frankfurt, Germany: 27-28 November 2017 [Register](#)

EARLY BIRD 10% OFF

REGISTER EARLY

Join us this fall for a special edition of Delphi Developer Days, a workshop focused on database development. This two-day workshop, presented by Delphi database experts Cary Jensen and Bob (Dr.Bob) Swart, provides you with an insider's perspective on database development with Delphi. Topics that are covered include connecting to databases using FireDAC, advanced FireDAC configuration, and essential database operations, such as reading and writing data, using indexes, and searching and filtering. We also cover advanced FireDAC techniques, including high-performance operations using Array DML, creating flexible queries using the SQL command preprocessor, and advanced editing using cached updates.

In addition, we take an in-depth look at multi-tier development using DataSnap with FireDAC and RAD Server. Here you will learn how to access your data from mobile applications, how to support both Delphi and non-Delphi clients using REST (REpresentational State Transfer), and how to create RAD Server microservices with Delphi.

You are welcome to bring your laptop to this workshop (though it is not required), and there will be opportunities to work with provided code samples and experiment with the techniques being covered. Power strips will be available.

All attendees will receive a special Delphi Developer Days edition book, which will include Cary Jensen's best-selling Delphi database book, *Delphi In Depth: FireDAC*. The course book will also have additional material on multi-tier development using DataSnap and RAD Server, accessing data from mobile applications, interacting with both Delphi and non-Delphi clients using REST (REpresentational State Transfer), and creating RAD Server microservices with Delphi. This year's book will be our longest ever with over 500 pages of material.

If you are serious about Delphi database development, this workshop is for you.

In previous years, Cary's co-presenters have included Marco Cantù (currently the Embarcadero RAD Studio Product Manager), Nick Hodges, Director of Engineering at Embarcadero Technologies, and Ray Konopka. Cary says, "Bob is an outstanding presenter and very knowledgeable about DataSnap and how to access data from mobile applications." "I'm excited to return to Delphi Developer Days. Cary and I are looking forward to this year's special database workshops", says Bob.

All Attendees Receive:

- \* An extensive course book written by Cary and Bob that includes the material covered in the workshop
- \* Source code examples from workshop plus extra examples
- \* Lunch on both days

Space is limited. "We want enough working space for everyone so we have strict limits on attendance," says Cary, "Bob and I also want you to have the opportunity to interact with both of us. In the past, we have sold out many of our events, so register early in order to reserve your seat in the city of your choice." Loy Anderson, the event coordinator, adds, "We're also particular about where we hold our

events. All of our event locations are close to airports and/or train stations. As a result, each city has an international flavor, in that we get developers from many different countries. In addition, many different industries are represented, and the discussions, both during and between sessions, are stimulating and thought-provoking."

Registration is now open for all workshops. Discounts are available for early registration (10%), previous attendees (20%), and groups of developers from the same company (15%). Price and registration information is available at: <http://www.DelphiDeveloperDays.com>.

**Early Registration Discount: Register five weeks in advance of the event date and receive a 10% discount off of the event price.**

After this fall special database workshop, Delphi Developer Days will return to its normal spring timeframe, and its traditional format of a combination of joint and separate talks. Due to the interactive nature of this workshop, space is limited. Register your seat now.

*About Delphi Developer Days:*

*Delphi Developer Days is an annual tour of two-day Delphi events. Delphi Developer Days provides a unique event that combines intense Delphi training with an intimate conference / meeting setting. This year's tour is jointly offered by Jensen Data Systems, Inc. and Bob Swart Training & Consultancy.*

Delphi Developer Days is proud to have a distinguished list of sponsors every year. Please contact us if you would like to become a sponsor.
